

CURRICULUM GUIDELINES

A.	Division:	Instructional	Date: November 6, 2001			
В.	Department / Program Area	Science and Technology		ew Course	Revision X	
	6			Revision, Section(s)	M, N, P	
				evised ate Last Revised:	November 18, 1998	
C:	CHEM 108	D : Introductory			E: 4	
с.				•		
-	Subject & Cou	-	otive Ti	tle	Semester Credits	
F:	Calendar Descri	iption:				
		This course quickly reviews the content of CHEM 104, including stoichiometry and atomic structure, and ontinues with the study of the following topics: thermochemistry, equilibrium, gases and liquids, acids a				
		ictions and electrochemistry, and sev				
G:		ontact Hours to Type of Instruction	H:	Course Prerequisites	:	
	/ Learning Setti	ngs		CHEM 104 (C or bet	tter) or CHEM 11 (C or better)	
		ls of Instructional Delivery and/or		<u>AND</u> MATH 101 or equivalent.		
	Learning Setting	gs:				
	Lecture and Lab	poratory	I:	Course Corequisites:		
				None		
	Number of Con for each descrip	tact Hours: (per week / semester				
	-		J:		s Course is a Prerequisite	
	Lecture: 4 hours Laboratory: 2 h			CHEM 110		
	-					
	Number of Weeks per Semester: 14		K:	K: Maximum Class Size: 36		
T.		CATE.

	Non-Cred					
		redit Non-Transfer	D			
		redit Transfer:			Granted X	
		SEE BC TRANSFER GUIDE FOR TRANSFER DETAILS (www.bccat.bc.ca)				
M:	Course Objectiv	Course Objectives / Learning Outcomes				
	The student will be able to:					
	1. Express the precision of a calculated quantity given the uncertainties in the measurements used in the					

calculation.

(c) Stoichiometry Review:

Types of reactions, calculation of percentage yield, limiting reactant problems, solutions: concentration units and stoichiometry, titrations.

2. Principles of Reactivity: Thermochemistry

Energy units, heat capacity, energy transfer, enthalpy, calorimetry, phase changes, Hess's Law, standard heats of formation, fuels.

3. Chemical Equilibrium

The equilibrium constant, interpretation of equilibrium constant values, calculations involving K, Le Chatelier's Principle, controlling chemical reactions.

4.

O: Methods of Instruction

The course will be presented using lecture, problem sessions and class discussions. In-class demonstrations of computer-based educational materials and videos will be used where appropriate. The laboratory consists of experiments performed by students, either individually or in pairs, which illustrate the lecture material, or encourage good experimental technique.

P: Textbooks and Materials to be Purchased by Students

The Chemical World: Concepts and Applications, Moore, Stanitski, Wood, and Kotz, 2nd Edition, Harcourt Brace and Company, 1998.

Chemistry 108 Laboratory Manual, Douglas College

Q: Means of Assessment

The student's performance in the course will be based on the following evaluations:

1. Lecture Material (75%)

(a) Two or three in-class tests will be given during the semester (30%).
